

Specification Properties of DuPont™ Tyvek® 1073B and 1059B Transition Protocol Materials—English

Property	Comparable Test Method	Units	Current Tyvek® 1073B	Transition Protocol Target Value Tyvek® 1073B	1073B Transition Protocol Typical Value	Current Tyvek® 1059B	Transition Protocol Target Value Tyvek® 1059B	1059B Transition Protocol Typical Value
Basis Weight	ASTM D3776 ¹ EN ISO 536 ¹	oz/yd ²	2.20 [2.10–2.30]	2.20 [2.10–2.30]	2.20 [2.10–2.30]	1.90 [1.82–1.98]	1.90 [1.82–1.98]	1.90 [1.82–1.98]
Delamination	ASTM D2724 ²	lb _f /in.	0.5 [0.4–0.7]	0.5 [0.3–*]	0.6 [0.4–0.8]	0.5 [0.3–0.7]	0.5 [0.3–*]	0.6 [0.4–0.8]
Gurley Hill Porosity	TAPPI T460 ¹ ISO 5636-5 ³	sec/100 cc	22 [8–36]	~22 [8–36]	22 [8–36]	20 [8–36]	~20 [8–36]	22 [8–36]

NOTES: 1073B and 1059B Transition Protocol typical values represent data from 200 and 100 rolls, respectively, across different line and polymer combinations from a limited number of manufacturing campaigns. Values will be refreshed, as necessary, upon data collection from additional campaigns and long-term variability discernment. Specification properties are controlled to a nominal value and released within specifications. The customer is responsible for determining that Tyvek® is suitable for the intended application. The ranges represent the controlled minimum and maximum values in which the product is released. Specification properties are typical values based on roll averages, with samples taken uniformly across the sheet. These properties are representative for uncoated Tyvek® as sold by DuPont. Any downstream operations, such as coatings applied by sterile packaging manufacturers (SPMs), may change these values.

1. Modified sample size.
2. Modified for speed and gauge length.
3. Modified for sealing fluid characteristics.

*Based on customer feedback, upper limit was not specified.

Thickness (Individual)*	ASTM D1777 ⁶ EN 20534 ⁷ EN ISO 534	mils	7.0	7.0	7.8	6.2	6.2	7.0

NOTES: 1073B and 1059B Transition Protocol typical values represent data across different line and polymer combinations from a limited number of manufacturing campaigns. Values will be refreshed, as necessary, upon data collection from additional campaigns and long-term variability discernment. Miscellaneous properties represent typical values based on roll averages, except for thickness (individual), with samples taken uniformly across the sheet. Thickness (individual) typical values are based on a population of pooled individual data points from multiple rolls. Miscellaneous properties are not controlled in the process, and therefore, are subject to slight changes from “normal” process drift. Customers must conduct their own tests to ensure suitability for the intended application. These properties are representative for uncoated Tyvek® as sold by DuPont. Any downstream operations, such as coatings applied by sterile packaging manufacturers (SPMs), may change these values.

*Thickness variability target is equal to, or less than, incumbent products.

MD = machine direction; CD = cross direction; LRV = log reduction value

1. Test conditions: 23°C, 85% RH.
2. Rate of use: 60 cm H₂O/min.
3. Modified for speed and gauge length.
4. Modified for 9/16-in. (14.28-mm) probe.
5. Modified for different backing standards, area and illumination.
6. 7.15 psi, 0.625-in. diameter presser foot.
7. Surface 2 cm², pressure 14.5 psi (100 kPa).
